

Remote Eyes® Drive Thru Expediter™

Improve Drive Thru order accuracy!

The Remote Eyes Drive Thru Expediter (DTE) improves the accuracy of Drive-Thru order fulfillment, resulting in improved customer satisfaction and higher throughput for Quick Service Restaurants with Drive-Thru lanes. DTE also supports dual lane Drive-Thru configurations, allowing customers to order concurrently and approach the payment and food expediting windows in any order while still maintaining accuracy of order fulfillment.

Identify Vehicles In Drive-Thru Lanes

DTE uses an advanced software digital imaging system to capture still frame images of each vehicle entering your Drive-Thru lanes as your customers place their orders. DTE automatically detects the order number and complete ticket detail off of your Point of Sale system and associates them with the vehicle image.

Deliver The Correct Food Order

DTE gives your food expeditor the information he needs to deliver the correct order to your customer 100% of the time. Your food expeditor can visually verify your customer and his order number by simply looking at the DTE display. To review the ticket details, your food expeditor simply touches the picture of your customer's car to bring up an easy to read display containing the customer's complete order information.

Streamline The Payment Window

DTE allows your payment window cashier to see a clear image of each customer's vehicle on a dedicated display with the customer's order number above the image. Using this image, the cashier can quickly and easily determine which ticket should be paid by which customer. With DTE installed, there is no need to ask the customer for his order number or ticket item details before collecting payment.

DTE Server

- > Compatible with Remote Eyes Version 6 and 8 Servers
- > Integrate with POSWatch™ to detect Drive-Thru orders
- > Capture images from Drive-Thru cameras

DTE Client

- > Windows XP, Vista and 7 compatible
- > Displays up to 9 customer vehicles at one time
- > Associates customer order number with image of customer vehicle
- > Supports touchscreen interface
- > Displays complete order detail with one touch
- > Supports order recall for up to 30 orders
- > Remove completed orders automatically or manually

Product Specifications

DTE Client displays up to 9 Drive-Thru customer vehicles with complete order details

Product Applications

Customers can use DTE in:

- > Quick service restaurants with single and dual lane Drive-Thru configurations
- > Improves dual lane throughput by up to 90%
- > Improves single lane throughput by up to 55%
